PLOCE, Natl. Acad. Sci. U.S.A. 87:5459-5463(1990).

-! FUNCTION: HIGH AFFINITY RECEPTOR FOR INTERLEGUKIN-3, INTERLEGUKIN-5

AND GRANULOCYTE-MACROPHAGE COLONY-STIMULATING FACTOR.

-! SUBUNIT: HETERODIMER OF AN ALPHA AND A BETA CHAIN. THE BETA

CHAIN IS COMMON TO THE IL-3, IL-5 AND GM-CSF RECEPTORS.

-! SUBLICALITY: CONTAINS: TEBROMETIN TYPE III-LIKE DOMAINS.

-! SIMILARITY: CONTAINS I PEBROMETIN TYPE III-LIKE DOMAINS.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A Description: receptor for interleukin-2
A; Pathway: interleukin-2 stimulated growth and differentiation of T cells, B cells, N
C; Superfamily: interleukin-2 receptor gamma chain
C; Keywords: cytokine receptor; duplication; glycoprotein; transmembrane protein
F; 1-72/Domain: signal sequence #status predicted <SIG>
F; 23-369/Product: interleukin-2 receptor gamma chain #status predicted <MAT>
F; 256-284/Domain: transmembrane #status predicted <TMM>
F; 21, 75, 84, 96, 159, 164, 306/Binding site: carbohydrate (Asn) (covalent) #status predict
    A;Introns: 39/1; 90/2; 152/1; 199/3; 254/1; 286/2; 308/3
C;Complex: The high affinity receptor is a heterotrimer of alpha (see PIR:UHMS2), bet

"Cloning and characterization of a binding subunit of the interleukin I3 receptor that is also a component of the interleukin 4 receptor."; Proc. Natl. Acad. Sci. U.S.A. 93:497-501(1996).

-!-FUNCTION: BINDS IL.-13 WITH A LOW APFINITY. TOGETHER WITH IL-4R-ALPRA CAN FORM A FUNCTIONAL RECEPTOR FOR IL.-13. ALSO SERVES AS AN ALTERNATE ACCESSORY PROFEIN TO THE COMMON CYTOKINE RECEPTOR GAMMA CHAIN FOR IL-4 SIGNALING, BUT CANNOT REPLACE THE FUNCTION OF SIMILARITY).
                 KNLHYKDGFDLNKGIEAKIHTLLPWQCTNGSEVQSSWAETTYWISPQGIPETKVQDMDCV 146
                                                                                                                                              -!- SUBUNIT: INTERLEUKIN-13 RECEPTOR IS A COMPLEX OF IL4R-ALPHA, IL13R-ALPHA, AND POSSIBLY OTHER COMPONENTS (BY SIMILARITY).
-!- SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
-!- TISSUE SPECIFICITY: SPLEEN, LIVER, THYMUS, HEART, LUNG, KIDNEY,
-!- STONACH, BRAIN, SKIN, AND COLON; BUT NOT SKELETAL MUSCLE.
-!- SIMILARITY: CONTAINS I IMMUNOGLOBULIN-LIKE C2-TYPE DOMAIN.
-!- SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Receptor; Transmembrane; Glycoprotein; Immunoglobulin domain; Signal. -!- DISEASE ALSO THE IL-13 RECEPTORS.
-!- DISEASE: DEFECTS IN ILZER ARE THE CAUSE OF A SEVERE COMBINED IMMUNODEFICIENCY, WHICH IS KNOWN AS ACAMMACLOBULINEMIA, SWISS TYPE ON **LINKED SEVERE COMBINED IMMUNOPEFICIENCY DISEASE (XSCID).
-!- SIMILARITY: BELONGS TO THE CYTOKINE FAMILY OF RECEPTORS.
-!- SIMILARITY: CONTAINS I FIBRONECTIN TYPE III-LIKE DOMAIN.
-!- DATABASE: NAME-PROW; NOTE-CO Guide CD132 entry.
-!- DATABASE: NAME-PRILZRGBASE; NOTE-X-linked SCID mutation database;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             "B-cell-negative severe combined immunodeficiency associated with a common gamma chain mutation.";
Hum. Genet. 99:677-680(1997).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          "Atypical X-linked severe combined immunodeficiency due to possible spontaneous reversion of the genetic defect in T cells."; New Engl. J. Med. 335:1563-1567(1996).
